Subject: Today on Climate Beat

February 26, 2018

In today's coverage . . .

. . . a new peer-reviewed study finds that biomass residuals – such as branches and tree tops left over from forestry operations – still have a large net greenhouse gas impact when burned for energy, seeking to counter pro-biomass arguments that the fuel is carbon neutral due to emissions the residuals would release through decomposition.

And our daily news roundup looked at a trend in which EPA is receiving significantly more Freedom of Information Act requests and lawsuits over those requests compared to prior administrations, with critics arguing it stems from the agency's secrecy.
